## Aim:

Write a program to search a key element in the given array of elements using binary search.

Exp. Name: Write a C program to Search an element using Binary Search

At the time of execution, the program should print the message on the console as:

```
Enter value of n :
```

process

For example, if the user gives the input as:

```
Enter value of n : 3
```

Next, the program should print the messages one by one on the console as:

```
Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :
```

if the user gives the **input** as:

```
Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56
```

Next, the program should print the message on the console as:

```
Enter key element :
```

if the user gives the input as:

```
Enter key element : 56
```

then the program should print the result as:

```
After sorting the elements in the array are Value of a[0] = 33
Value of a[1] = 56
Value of a[2] = 89
The key element 56 is found at the position 1
```

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The Key element 25** is **not found in the array**".

**Note:** Do use the **printf()** function with a **newline** character (\\n)) at the end.

```
Program510.c
```

```
#include<stdio.h>
int main()
{
  int a[20],i,n,key,ub,lb,mid,pos=-1,temp,j;
  printf("Enter value of n : ");
  scanf("%d",&n);
```

```
for(i=0;i<n;i++)</pre>
      printf("Enter element for a[%d] : ",i);
      scanf("%d",&a[i]);
