Date:2023-06-16

#### Aim:

S.No: 17

Write a program to implement queue using linked lists.

```
Sample Input and Output:
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 1
        Enter element : 57
        Successfully inserted.
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 1
        Enter element: 87
        Successfully inserted.
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 5
        Queue size : 2
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 3
        Elements in the queue : 57 87
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 2
        Deleted value = 57
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 2
        Deleted value = 87
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 3
        Queue is empty.
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 5
        Queue size : 0
        1. Enqueue 2. Dequeue 3. Display 4. Is Empty 5. Size 6. Exit
        Enter your option : 6
```

## **Source Code:**

## QueueUsingLL.c

```
#include <conio.h>
#include <stdio.h>
#include "QueueOperationsLL.c"
int main() {
   int op, x;
   while(1) {
      printf("1.Enqueue 2.Dequeue 3.Display 4.Is Empty 5.Size 6.Exit\n");
      printf("Enter your option : ");
      scanf("%d",&op);
   switch(op) {
      case 1:
            printf("Enter element : ");
            scanf("%d",&x);
```

```
enqueue(x);
            break;
         case 2:
            dequeue();
            break;
         case 3:
            display();
            break;
         case 4:
            isEmpty();
            break;
         case 5:
            size();
            break;
         case 6: exit(0);
   }
}
```

#### QueueOperationsLL.c

```
int count=0;
struct node
   int info;
   struct node*next;
};
struct node *front=NULL, *rear=NULL;
struct node* newNode()
   struct node *temp;
   temp=(struct node *)malloc(sizeof(struct node));
   temp->next=NULL;
   return temp;
}
void enqueue(int x)
   struct node *temp;
   temp=newNode();
    temp->info=x;
   if(front==NULL&&rear==NULL)
    {
      front=temp;
      rear=temp;
      count++;
    }
    else
      rear->next=temp;
      rear=temp;
      count++;
   printf("Successfully inserted.\n");
void dequeue()
```

```
{
   struct node *ptr;
   if(front==NULL)
   {
      printf("Queue is underflow.\n");
      return;
   }
   else
   {
      if(front==rear&&front!=NULL)
         ptr=front;
         printf("Deleted value = %d\n",ptr->info);
         front=rear=NULL;
          free(ptr);
          count--;
      }
       else
     {
      ptr=front;
      printf("Deleted value = %d\n",ptr->info);
      front=front->next;
      free(ptr);
      count--;
      }
   }
}
void display()
   struct node *ptr;
   if(front==NULL)
      printf("Queue is empty.\n");
      return;
   }
   else
   {
      ptr=front;
      printf("Elements in the queue : ");
      while(ptr!=NULL)
         printf("%d ",ptr->info);
         ptr=ptr->next;
      }
      printf("\n");
   }
}
void isEmpty()
   if(front==NULL)
   printf("Queue is empty.\n");
   return;
   }
   else
```

```
printf("Queue is not empty.\n");
   }
}
void size()
   printf("Queue size : %d\n",count);
  }
```

## Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
